Standard Width Flooring

GRADING

EUROPEAN OAK STANDARD WIDTH FLOORING

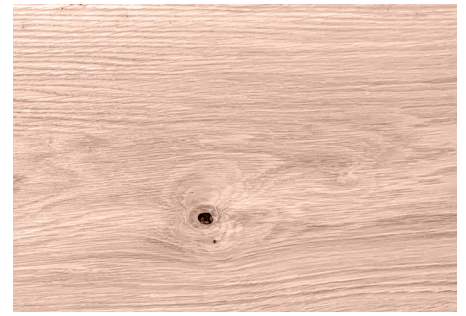

PREMIUM

Premium grade showcases vertical grain with minimal pin knots and an overall linear, clear looking floor with beautiful sweeping medullary rays (flecking) throughout.

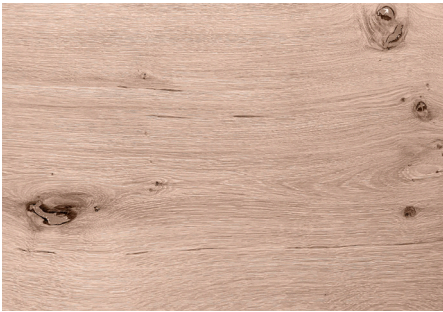

PRIME

Prime grade is a clean grade with sweeping cathedral grain, minimal pin knots and sap. Prime is less dynamic than rustic and creates a clean, modern look while retaining the natural feel of center cut planks.

CHOICE

A perfectly balanced floor featuring prime grade with a mix of handsome character. Knots are sparse and mostly unfilled. No large checks or cracks creating an overall calm look and feel while embracing the natural beauty of wood.

NATURAL

An embrace of the natural tendencies of oak. A mix of sweeping cathedral grain, tight vertical grain edges, knots and handsome cracks. Some flecking on the edges of wider boards can be expected. Sap wood is infrequent but can appear along edges of boards.

LIVE

Live grade is dynamic and full of character. Striking heart oak from the tree's core, handsome knots and rift and quartered edges make this floor a dynamic expression of the mighty tree itself.

EUROPEAN OAK

Quercus Robur, the king of the temperate forests of central and northern Europe is one of the most sought-after species of deciduous hardwoods on the planet. Although related to Quercus Alba (Northern White Oak) European oak is singular in its smooth texture, cool consistent color range and straight tight grain. The trees' straight, thick trunk produces planks of extraordinary length and width.

Wood is perfectly imperfect! All images are meant to indicate general characteristics, but every MADERA wood floor is a unique expression of nature made from living material. All wood floors, no matter how high the grade, will have variation in grain and character. Please contact our team at sales@maderasurfaces.com with any questions or concerns.
